

Equitable access

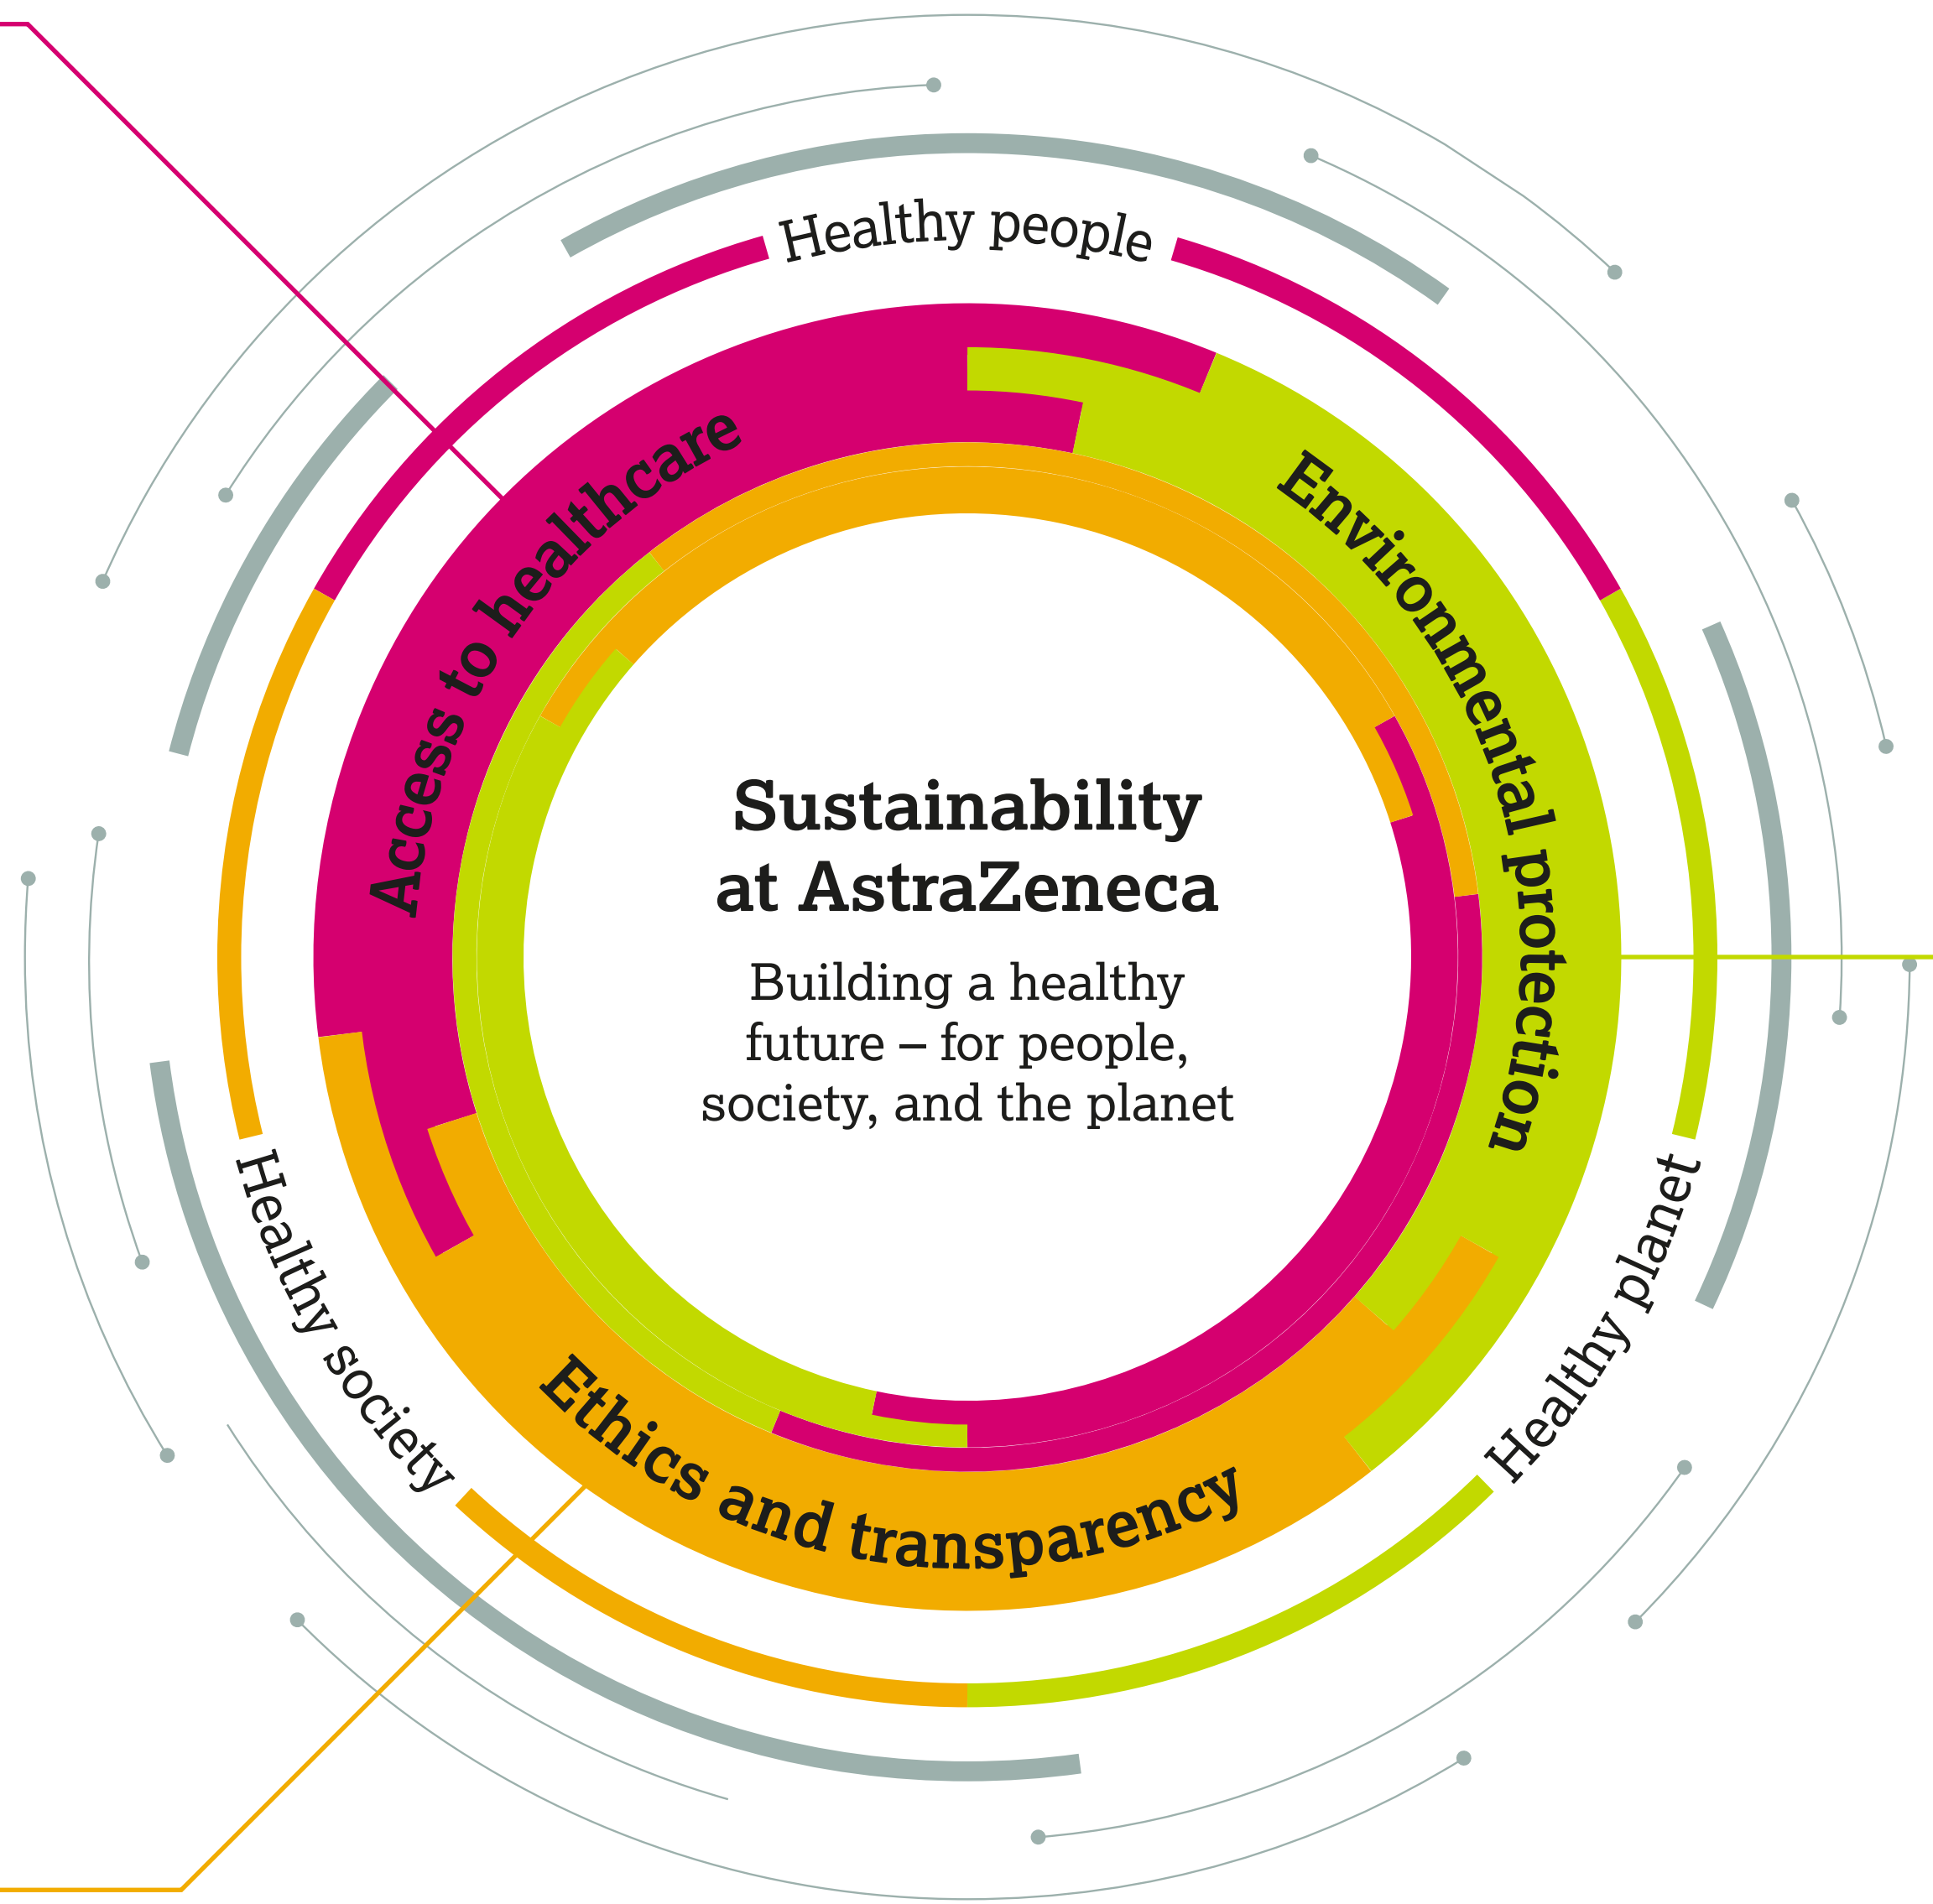

Affordability and pricing

Health system resilience

Ethical business culture

Inclusion and diversity

Workforce safety and health

Ambition Zero Carbon

Product sustainability

Natural resources

We value the diverse perspectives of internal and external stakeholders, which help to shape our sustainability strategy and guide its implementation.

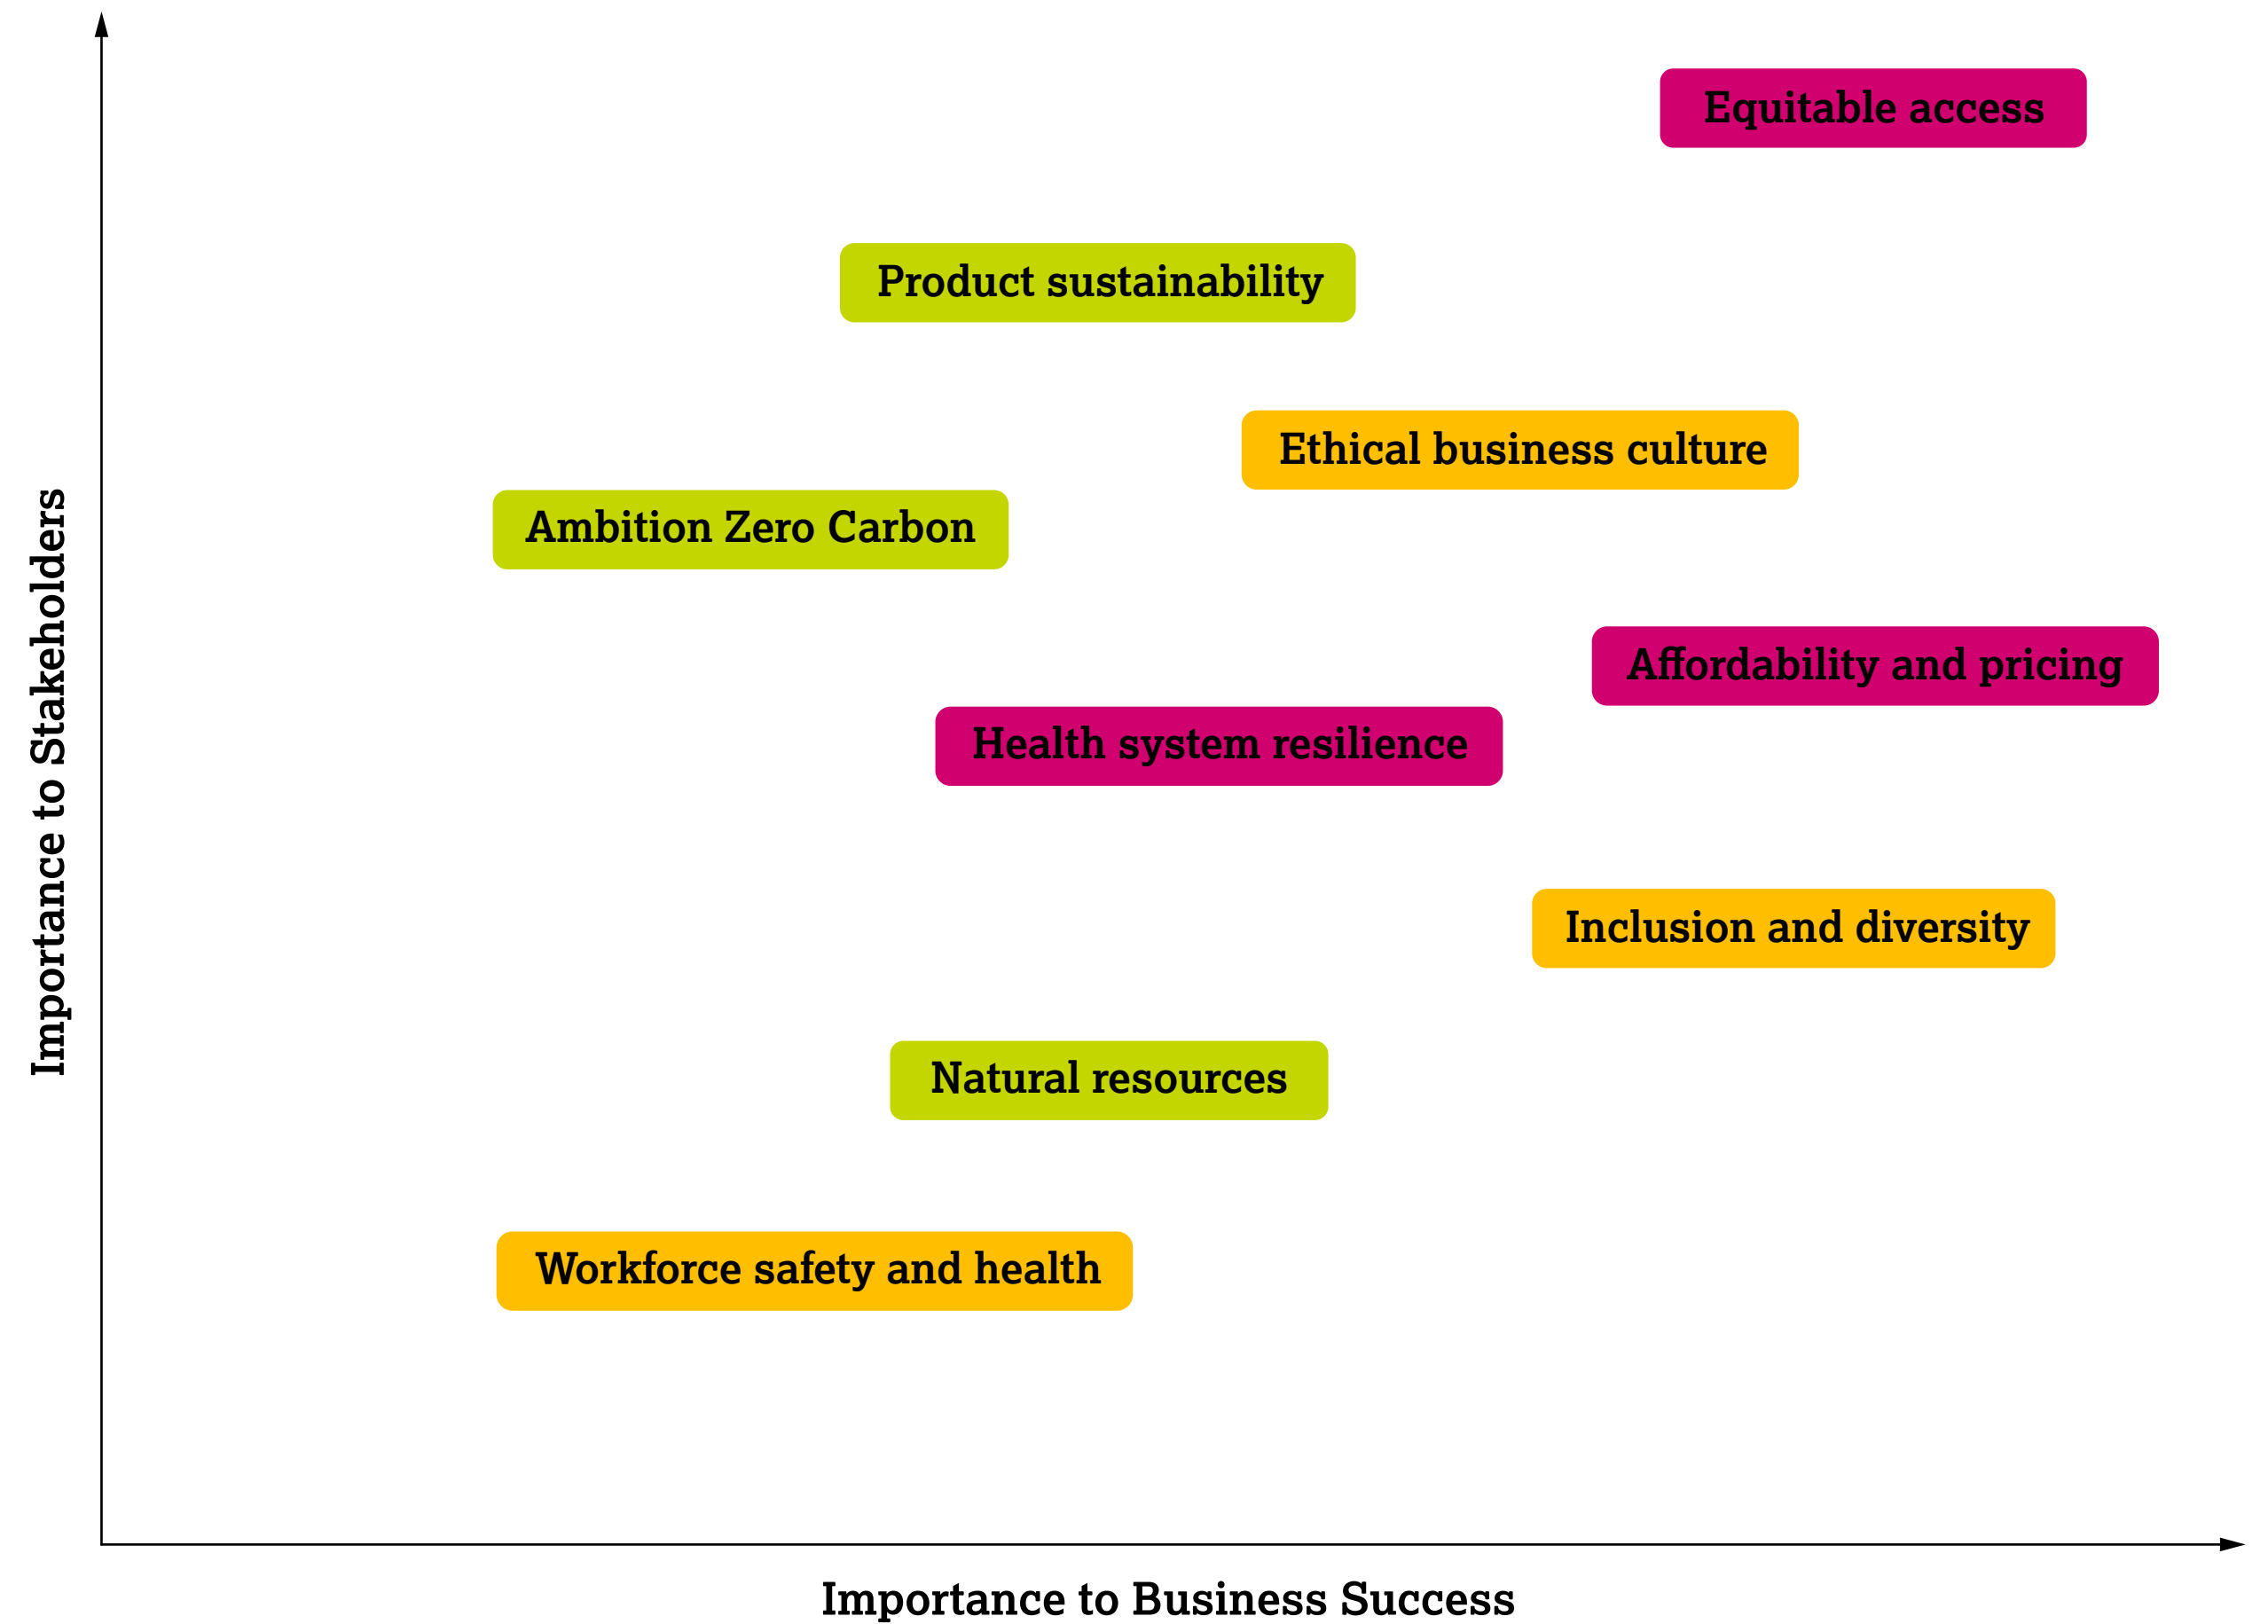

We welcome transparent dialogue via a range of communication channels — online, face to face and in groups.

Materiality assessment

Our sustainability strategy is guided by the materiality assessment we conducted in 2021, which identified the issues that matter most to AstraZeneca and our stakeholders and showed where we can have a positive impact. We assess the relevance of our strategy and material focus areas annually, through continuous dialogue with our stakeholders and horizon-scanning for emerging sustainability topics. This process confirmed that our existing nine focus areas remained a priority in 2022.

Our material focus areas are grouped under three interconnected strategic priority pillars, each of which is detailed in our 2022 Sustainability Report, along with relevant targets, goals and examples of sustainability in action.

Materiality Map

■ Access to healthcare
 ■ Ethics and transparency
 ■ Environmental protection
